ABOUT US

LARS LAJ® means Lars plays!

Our first catalogue – 1975!

The first certifications of our products took place in the 1970s!

Our trademark and logo were registered in 1982!

Over 50 years of experience!

Lars Laj was founded in the 1970's in Copenhagen, Denmark, by Lars Thye – a creative carpenter, with a vision! He built a dream playground for his young children. His creation became so popular, that he decided to create his company. He named it "Lars Laj" – which means "Lars plays"! Today the company has a big manufacture in Poland, warehouses in Denmark, offices and dealerships all over the world! Despite of this growth we're still a family-owned business, managed by the second generation of the Thye family.

Building a better tomorrow! – piece by piece

All our products are designed in accordance with all applicable norms.

We use certified materials that comply with all required norms. Only FSC-certified wood.

All chemicals have certificates of safety for the user and the environment. The disposal of waste is strictly controlled.

DURABLE AND REPAIRABLE!
Thanks to the extensive after-sale care, we limit the waste.

HDPE boards are made of 40% recycled material and are 100% recyclable. The steel we use is 100% recyclable.

We sell the sawdust for bedding used in animal farming. The bulkier wooden waste is used to heat our company's building.

We use transport responsibly, using transit when possible. We are always looking for local suppliers and subcontractors.

We are creative, open to new ideas, and innovative. We collaborate with architects and designers on special, tailor-made projects.

Economic and ecological use of materials. Creative use of leftovers for e.g. educational boards, flower pots, decors and many more...

We include handmade products and parts – highest quality, friendly for the environment, and promoting artisan crafts.

Our original **WOOD2WOOD** foundations are 100% natural, safe, stable and durable – they become stronger with age.

Packaging paper and cardboard are collected and recycled. Our packaging meets the requirements of Directive 94/62/EC and other standards.

We do not accept gender discrimination.

We facilitate a smooth return to work after maternity leave, and we adjust the working conditions to the schedule of family life.

We promote equality in the labor market, economic independence for all, equal pay, equality in decision-making, inclusion, and dignity.

We are constantly working on improving working conditions through training and integration. We employ people with disabilities.

Our offices use proper waste management. We save electricity, water, and paper. We use post-production waste for heating.

We limit travel; our sales and cooperation with offices around the world are done almost exclusively via email, telephone, and online meetings.

We choose local suppliers: short transport = less pollution! We promote the economic development of our region.

We cooperate with local kindergartens, primary schools, and sports clubs, taking part in campaigns that promote healthy lifestyle.

We support international organizations dedicated to helping children around the world. We are a member of FEPI.

We cooperate with local universities and offer student internships. We organize internship competitions.

Our agreements with suppliers, subcontractors, and business partners contain provisions that ensure fair trade practices and a firm stance against child labor.

We cooperate with partners from developing countries, providing the necessary tools to facilitate the start and decent development.

Green conscious!

NORDIC SWAN ECOLABEL

This certificate is a proof of our care for the environment and our commitment to providing the highest quality products, made for the generations to come.

WHAT IS NORDIC SWAN ECOLABEL

Nordic Swan Ecolabel is an internationally recognized Scandinavian certificate that signifies the highest environmental and quality standards. Obtaining this certificate means that products meet a set of rigorous criteria regarding the environmental impact of the materials used in every stage of production and transportation as well as the possibility of future recycling.

HOW WE ACHIEVE IT:

- Minimizing the environmental impact: All of the stages of all product life, from the development to production and distribution, were designed in a way to minimize their impact on the environment
- Rigorous requirements regarding chemicals: We are using only safe, non-toxic materials which ensure the safety of the users and the environment. The main material is non-impregnated, FSC-certified robinia wood. Over time the wood changes color and texture, which is a natural and desired process. A pattern of cracks appears, that does not affect durability or increase the risk of fungi.
- Constant improvement and development: Our team is constantly striving to improve the environmental standards of production and the products themselves by ensuring they are up to date with the newest environmental norms.
- Smart packaging & transportation: All packaging is largely made out of recycled materials. The products are packed with the least possible amount of additional materials.
- Spare parts: Most elements can be replaced without the need to disassemble the construction, which helps save materials and minimize waste

LARS LAJ[®] Premium Purchase Experience

CERTIFICATION

LARS LAJ considers safety and quality as our first priority. Our playground system has been designed according to the European standard EN 1176.

Additionally, the articles have been individually certified, tested and approved by TÜV in Germany. According to the norm DIN EN 1176. TÜV controls that products are designed according to the rules of the EN 1176, and they evaluate that the chosen materials and components realistically offer a lifetime of 15 years for the whole play unit. Over and above individual play item certification, there is a minimum of 1 yearly factory inspection confirming that the manufacturer assures that each individual product/component matches the certified products. Designing individual projects our designers are required to work according to the EN 1176 rules.

CONSULTATION

We offer plans and drawings for playground propositions free of charge, with no obligation to the customer. During the design process, the LARS LAJ team always uses their knowledge and experience to help our clients make the right decision. Our consultants are here to listen and find a solution that is suitable for you, whether you need an entirely new playground or would like to update, renew, and upgrade an existing project.

WARRANTY

We are proud to say that our play equipment is built without compromising on safety, quality, and materials. This allows us to offer the highest warranty conditions given in the industry, ranging from 5 years to 20 years.

PRODUCTION > DELIVERY > INSTALLATION

The LARS LAJ products can be delivered worldwide with or without installation assistance. Deliveries for distant areas can be installed by the client themselves or with the help of local installers. Each playground, as well as each particular unit, has its own detailed installation manual, ensuring that important safety aspects will be observed during installation.

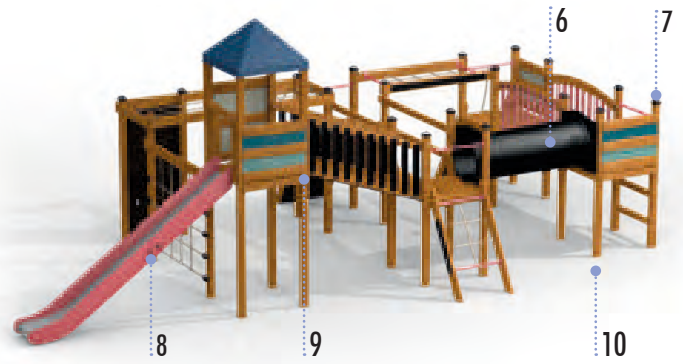

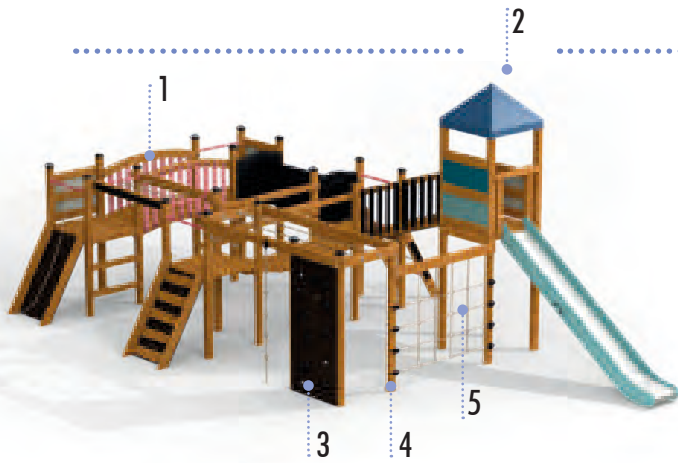

Visit www.larslaj.com or contact our sales department to find out more.

AFTER SALE CARE

Our extensive after-sale care is among the top reasons why clients choose us. We are confident that our products are top quality. We want you to love them as much as we do; therefore, we offer assistance post-sale. Contact us—our experienced team will offer consultation and help find solutions made for your project.

High Quality Materials

1.
The PE plates we use in our playgrounds are made in a variety of colors, so you can choose the color set that you like the most. Visit our website to find out more.

2.
Pyramid roofs are made out of colourful UV resistant fiberglass, which is unaffected by weather conditions and requires no service.

3.
Our climbing stones are made of polyethylene. Their porous surface prevents fingers from slipping. The climbing walls are made of 18 and 22 mm thick waterproof plywood, with a thin layer of strong and weather resistant laminated surface.

4.
The plastic components used in our climbing nets are designed to last. Combined with our use of steel reinforced rope, it helps safeguarding against vandalism and hard use.

5.
A long-lasting plastic connection, inherently resistant to corrosion.

6.
Our plastic tube tunnels, with a diameter of 450 and 560 mm, and wall thickness of 12 mm, are almost unbreakable.

7.
Wooden posts are delivered with plastic caps, safeguarding against weather conditions.

8.
Panel sheets are fastened to the post with special anticorrosive screws with a rubber washer.

9.
All wooden elements are planed, all edges are rounded and all screws and bolts are either countersunk or covered with plastic caps.

10.
GALVANISED STEEL FOUNDATION
Our standard playground is supplied with galvanised steel foundations.

STEEL

11.
"WOOD2WOOD" FOUNDATION SYSTEM
Our original 'wood2wood' foundation system ensures durability without compromising with the environment. It is water resistant, does not corrode and has a warranty of 10 years.

W2W

LARS LAJ® From Idea to Realisation

VISION → VISUALISED

Every Lars Laj playground starts with a consultation. We discuss all the elements of the project - the size and all conditions of the area, the target user group, the budget, surfacing, materials, equipment, colors, personalization and so on. Once you decide on the details - we can prepare realistic visualisations that will make it easy to imagine how all this comes together.

“LARS LAJ ACADEMY”

- cooperation with FUTURE ARCHITECTS

Lars Laj Academy is a collaboration with local higher education institutions. We offer first jobs and student internships. Through cooperating with the school authorities our design contests can be a part of the curriculum. To our winners we offer not only material prizes, but also job opportunities and to some even a possibility to implement their project into production.

The 2025 edition of Student Design Contest, held at the West Pomeranian University of Technology in Stetin/ Poland, was won by students of Architecture Department - **Zuzana Kielar** and **Oliwia Krakowiak**. The project was innovative, interesting, very well presented and thought out. We are sure that these talented young architects will have a very bright future. Congratulations!

For the full feature, go to page 176.

“STEVE”

by Zuzanna Kielar and Oliwia Krakowiak, 1st PRIZE

DESIGN LAB

At LARS LAJ we are always open to new and inspiring ideas. We think outside the box. That is why we have created our own "DESIGN LAB". It consist of a team of conceptual work orientated designers that are working on new and futuristic solutions and cooperate with designers and architecture ateliers. We offer cooperation on every stage of development to bring the vision to life.

HDPE PLATES

The HDPE plates we use in our playgrounds are made in a variety of colors, so you can choose the color set that you like the most. Visit our website to find out more.

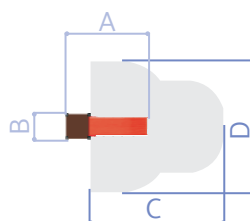

PE SLIDES

COMPONENT SLIDE

HILL SLIDE

Platform height	A x B	C x D
0,60	1,48 x 0,70	2,84 x 3,41
0,90	1,95 x 0,70	3,31 x 3,41
1,20	2,61 x 0,70	3,97 x 3,50
1,50	3,01 x 0,70	4,36 x 3,50
2,00	3,99 x 0,70	5,34 x 3,50

METAL PLATES

Metal plates have thickness of 0,5 - 0,8 mm. They are galvanised and covered with plastisol. They have a minimum 20-year lifespan and require absolutely no maintenance.

HPL PLATES

HPL consists of multiple layers of resin impregnated paper. Inner layers are made of sheets of paper soaked in resin, with decorative layers on the outside. During the manufacturing process the pressure reaches even 9 MPa and the temperature is over 150°C. Our playground equipment made with HPL plates is durable, resistant and look great.

DECORS ONLY:

COLOURED WOOD PRESERVER FOR ROBINIA WOOD

Most robinia wood elements of our playgrounds are in standard treated with wood preserver in the colour “light walnut”. Other colours are available upon special request. Notice that any colour changes require separate arrangements regarding the delivery time and price. Please contact us to discuss the details of your customized project.

Colors displayed may look different in real life, photo, and rendered image.

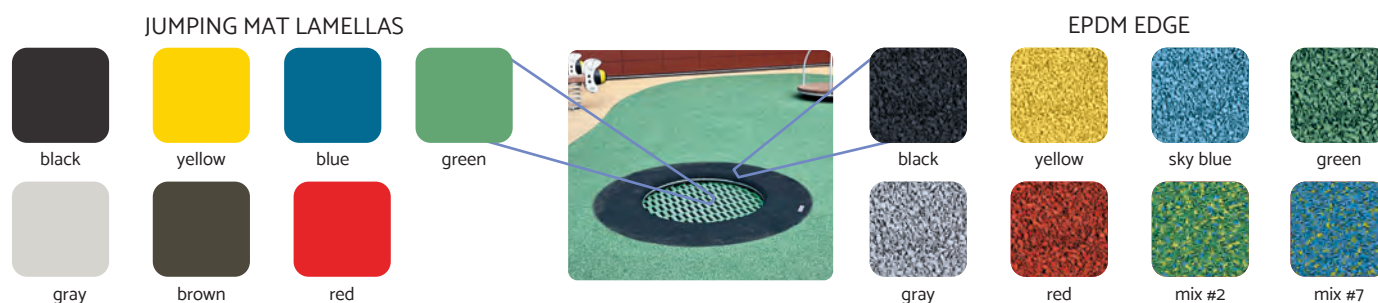

POWDER COATED METAL

Our powder coated metal products and product parts are available in several standard color combinations. Metal elements can be by special order painted in any color from the RAL palette, but check out our new “PASTELOVE” palette of 7 new standard colors to chose from!

TRAMPOLINES

Our trampolines consist of strong and resistant jumping mat, made with lamella elements, and EPDM edging which ensures safety and fall protection. Standard color of our trampolines is green jumping matt with black EPDM edge, but other colors available upon request.

Critical Fall Height

0-59 cm

Safety surface optional

60-99 cm

Natural grass, sand, grass mats, rubber tiles, artificial grass, wetpour

100-300 cm

Sand, grass mats, rubber tiles, artificial grass, wetpour

Surfacing is an integral and equally important part of any playground. What determines a safety surface is its shock absorbing qualities, that can be measured and specified. A surface must be able to cushion a fall from the highest point accessible on the piece of equipment. This is called a "Critical Fall Height" and is specified for each product from our offer.

Look for this icon and choose accordingly!

NATIVE SOIL/ LAWN

A well kept lawn can be accepted as a shock absorbing surface for equipment with Critical Fall Height of less than 100 cm. These exclude items that enable the user to move in uncontrollable way, such as for example carousels, see-saws or swings.

SAND/ BARK/ GRAVEL

Sand is a great choice of safety surfacing for a playground as it can provide an additional play function. Sand surface must be topped up in case of insufficient thickness of layer. Required thickness of loose material layer is specified in the norm and equals 300 mm. The sand or bark must be specially prepared and approved for use on playgrounds.

RUBBER GRASS MAT SAFETY SURFACE

Grass mats can be installed directly onto grass, acting as a safety surface, and ceasing wear and tear of the grass. The holes allow the grass to grow through the mats and thereby create a green area. The safety mats are suitable for both sport and play areas.

The standard colour of the rubber mats is black. The basic dimension of rubber mats is 100x150 cm

ARTIFICIAL GRASS

Lars Laj Proplay system consists of impact mats, covered with artificial grass, providing a safe, clean and dry surface for children to play. The standard finishing colour is green, however other colours are available upon request. The use of Proplay mats enables drainage, both vertical and horizontal. The proplay mats can be laid on most types of base and they follow the contours of that base without cracking or any other damage.

Article no.	Critical fall height
15313 Lars Laj Artificial grass 25	1,30 m
15316 Lars Laj Artificial grass 35	1,70 m
15325 Lars Laj Artificial grass 45	2,10 m
15330 Lars Laj Artificial grass 70	2,70 m
15335 Lars Laj Artificial grass 90	3,00 m

RUBBER TILES

Rubber tiles are produced from colored rubber granulate with grain sizes of 1-3 mm, mixed with polyurethane glue. The combination of those components creates a safety surface with high impact absorption properties.

Not many other safe surfaces have as many advantages as the rubber tile surface: minimized risk of injury due to excellent impact absorption properties, ease of keeping the surface in a good technical condition, easy installation, perfect antislip and sound-absorbing properties, high humidity resistance, and accordance with the requirements of the norm EN 1177.

The rubber tiles can be laid on tarmac, concrete, or any other type of stabilized base and joined together with a system of connectors.

As rubber tiles do not crack, you can be sure that they will last for a great amount of time.

Standard colors: red-brown. Available upon request: grey • green • silver-grey • blue • black

Rubber tiles		
Article No	Thickness	Critical fall height
15035	35 mm	1,10 m
15040	40 mm	1,30 m
15045	45 mm	1,50 m
15050	50 mm	1,60 m
15055	55 mm	1,80 m
15075	75 mm	2,40 m
15090	90 mm	2,70 m
15110	110 mm	3,10 m

EPDM WETPOUR

Wetpour is one of the most versatile surface materials for indoor and outdoor use. It can be installed directly onto hard surfaces like tarmac with ramped edges. EPDM wetpour offers a possibility to create colorful designs that will not only assure safety but also add a unique character to the whole area. It can also be installed to form slopes, shapes, hills, and waves, which, together with color, give a definite wow factor to your playground.

Wetpour consists of two layers: a bottom layer made of black SBR granulate and a top layer made of colored rubber EPDM granulate. The task of the bottom layer is to absorb the impact energy. The top layer is UV resistant, and its task is to protect the bottom layer against wiping off.

Synthetic mass is a combination of granulate with polyurethane glue in proper proportions. The mixing of granulate with glue is done in the drum mixer.

The installation of wetpour begins with pouring a layer of black granulate. The toughening time of the layer is 24 hours. The next stage of the installation is toughening the surface with a metal roll and afterwards covering it with a layer of polyurethane glue. Two hours after the application of polyurethane glue, the top layer of colored granulate can be spread. The toughening of the layer of colored rubber mass is done with a metal roll after 24 hours from pouring it.

Synthetic surface – wetpour		
Article no.	Thickness	Critical fall height
15240	40 mm	1,50 m
15260	60 mm	2,00 m
15280	80 mm	2,40 m
15299	100 mm	2,80 m
15320	120 mm	3,00 m

SENSORY PLAYGROUNDS

Introducing our new product line – Sensorica. At the heart of this collection is a commitment to supporting childhood development through play. Each product is an opportunity for children to build confidence, express themselves, and form friendships – all while having fun outdoors. Designed in a diverse and cheerful color palette, the playgrounds naturally draw children in and create an inviting, inclusive space where every child feels welcome to explore.

The products are designed to stimulate children's senses – sight, hearing, touch, as well as balance and proprioception (deep sensory awareness). Children naturally learn through play, and sensory playground elements provide an ideal way to support this process. Such products engage their imagination and foster creativity, concentration, and cognitive development in a fun and meaningful way.

SAFETY ZONE LENGTH

SYNTHETIC SAFETY SURFACES:

- RUBBER TILES
- WETPOUR
- RUBBER GRASS MATS
- ARTIFICIAL GRASS

Safety surface of 6,5 m is required when using synthetic surfacing. All surfaces must be leveled within entire safety zone specified for each product.

OTHER SAFETY SURFACES:

- GRAVEL
- SAND
- WOODEN CHIPS

Safety zones of swings depend on the chosen seat. Multiple user seats require additional area of 1,5 m on each end of the safety zone. All surfaces must be leveled within entire safety area.

1st PRIZE: "STEVE" by Zuzanna Kielar & Oliwia Krakowiak

2nd PRIZE: "SPIDER TOWER" by Jakub Przeperski & Szymon Soldatke

Student Design Contest

“LARS LAJ ACADEMY” – cooperation with FUTURE ARCHITECTS

We are proud to support the next generation of architects through a design contest created for the talented students of the West Pomeranian University of Technology in Stettin/ Poland. Launched in April, this initiative reflects our commitment to investing in the future through education and the power of thoughtful, impactful design. We believe that great architecture design starts with real life – by offering young designers the chance to work within real-world requirements, regulations, and complexities of actual

project constraints, we help bridge the gap between academia and professional practice.

High number of great submissions made the jury's decision especially difficult! We extend our sincere thanks to all participants, faculty members, and university leadership for their dedication and support. Now, we are excited to introduce the winning projects that stood out in this strong field of entries.

Working with students on the competition project was an incredibly inspiring experience. They approached the design process with great commitment, demonstrating not only creativity and conceptual maturity, but also courage in searching for forms and solutions. The resulting projects showed a variety of approaches, many of them combining simple shapes into intriguing and functional forms, which stood out in terms of aesthetics, thoughtful relation to the needs of users, and the context of the surroundings. I am very glad that we could be part of this project. It was an excellent example of combining design education with practice and real professional challenges.

– Assistant M.Sc. Eng. Arch. Monika Sęk,

Department of Contemporary Architecture,
Design Theory and Methodology
