

Playgrounds

Playful markings that brighten your day

Safe, sustainable and efficient mobility

Make playtime count

Being physically active benefits our health, well-being, and learning abilities. It, therefore, makes sense to integrate it into our daily lives from a young age. And what better place to start encouraging an active lifestyle than at school where children spend most of their day?

Dark and boring playgrounds are not inspiring for children to play on. So why not brighten up such spaces with colourful and creative markings to make the schoolyard or public space something special? With our preformed thermoplastic material you get permanent applications that make it fun to learn during break time or as part of the school lessons. With DecoMark's many standard game designs, you can make it fun to learn how to read, count, or telling the time

With a range that includes hopscotches, sports fields, number tables, and traffic playgrounds,

there is something for everyone – and if not, we can custom-design markings to fit your exact requirements.

The material's steadfast colours are retained regardless of weather conditions and frequency of use. They provide a firm foundation for active and educational play. You do not have to worry about safety issues either. Our high-friction materials minimise the risk of slippery surfaces and make it a safe place for children to play.

Whether it be to encourage counting or reading, or simply for play, DecoMark provides the perfect solution. Designs can be supplied in a preformed, easy-to-lay 'kit' or in packs of sheets, lines, or rolls for bespoke application.

"A school that constantly strengthens its capacity as a healthy setting for living, learning, and working".

The World Health Organisation's definition of a health-promoting school.

**Permanent markings
that last**

When heated, the DecoMark material creates a strong bond with the application surface to enhance durability. In addition to this, the special composition of the preformed material provides a high UV resistance which makes the colours stay brighter for longer regardless of weather conditions and frequency of use. As a result, you will get a marking that can last 6–8 times longer than markings painted on the surface.

**Safe, slip-resistant
surfaces**

DecoMark is a thin, flexible, and high-friction material which helps minimise the risk of slippery surfaces. Thanks to the material's inherent skid-resistant properties, you do not have to worry about slipping and falling accidents. Even small feet will stand firmly on a DecoMark surface, making it a safe place for the children to play whether they are skipping, jumping, or running.

**Reduced
environmental impact**

Made from non-toxic materials, DecoMark is free of heavy metals, lead, and chromates. The pigments used are all organic and more than 70% of the binder is acquired from sustainable sources making it unharmed for the environment. Choosing DecoMark for your playground applications also minimises the risk of skin problems and allergic reactions for the people using it. This means it is safe to use for both the applicators and playing children.

Active
learning

Playground makeover

At Geveko Markings, we believe that it is important to give back to our communities. Especially where children are concerned.

Sacred Heart School, in the UK, has over 300 pupils from a mix of different nationalities. They aim to provide a warm, happy, and stimulating environment in which the children enjoy learning and are able to appreciate its importance and relevance to their lives. Their motto is "to live, to love, to learn." Unfortunately, the markings on their playground had not been loved in some time. Being over 15 years old, they had started to deteriorate and break up and were no longer usable. The school was therefore keen to have the playground rejuvenated to help promote fun and active learning in their pupils.

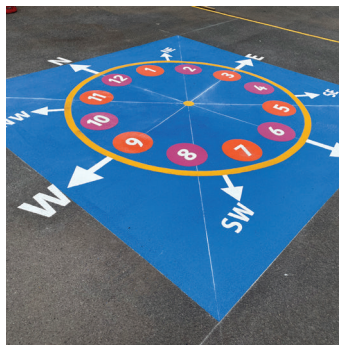

An exciting selection of DecoMark games was installed, including a hopscotch, an alphabet, and also a refresh of the sports court. The centre piece to the installation was a large map of the world which expresses the diversity of the school's pupils and at the same time is a great learning tool.

Make the surface your canvas

DecoMark can add a splash of colour and a creative look and feel to any dull asphalt surface. These decorative markings offer an easy way of transforming any park, playground, or public area into a safe and visually stunning space where only your imagination sets the boundaries.

All our preformed materials are even designed to bind well with our paints and plural components, which provides you with the ultimate freedom to create the decorative area of your choice.

Bespoke designs

Horizontal surfaces have a high potential for creating colourful expressions - and at Geveko Markings, we make it easy for you to add your creative flair to any area.

We have a lot of popular game designs in our standard offering which has helped many playgrounds achieve a visual upgrade. But the possibilities don't stop there! The flexible DecoMark material offers an almost endless array of options when it comes to creating the markings of your choice. With a combination of your ideas and our colourful materials, we can create bespoke markings to fit your exact demand.

Learning to use roads confidently

If we start cycling when we are children, we create a habit that will benefit us throughout our lives. Bicycle playgrounds can help any inexperienced road user get a safe, fun, and engaging start on their cycling lives.

Although mainly aimed at children, bicycle playgrounds can accommodate anyone who may feel insecure riding on the road without appropriate training. By using scaled-down versions of existing facilities for pedestrians and cyclists, users are allowed to familiarise themselves with real-world scenarios in complete safety, before having to face real traffic.

Our full range of marking materials provides everything you need to create a small-scale replica of real-life traffic situations. The colourful PlastiRoute™ materials are ideal for areas that need to stand out such as mini bike lanes or parking spaces, while preformed PREMARK™ symbols such as stop signs and bicycle symbols can easily be made to complete the bicycle playground.

Safe routes to school

It is one thing to make children confident when cycling, but another is to make the streets safe for them to cycle on. To accommodate this school streets are being implemented in more and more places. In London, UK more than 383 school streets were implemented by 2021. With some schools reporting over 50% fewer children arriving by car, it has become a key part of the city's strategy to reduce congestion, and create better areas.

In the major tourist destination Den Haag in the Netherlands, over 15 streets with the worst congestion are now closed to motor traffic during school drop-off and pick-up times. Combined with the installation of an extensive cycle network, over 60% of secondary school children now cycle to school.*

A last example is from the city of Odense, Denmark, where the local municipality has replaced on-street parking with play equipment, traffic calming, and colourful road markings, outside certain schools, and now sees 4 out of 5 children cycle, walk, or scoot. Local politicians boast that it's made them the most child-friendly city in Denmark.**

Bold solutions for bold ideas

Durable, creative and safe surfaces can be achievable! With our strikingly coloured paints, you can give playgrounds, public areas and other public spaces a safe and visually stunning makeover.

Paint has long been a part of Geveko Markings' range of safety marking materials. They provide a cost-effective, fast-drying solution that is suitable for most surfaces. Paints are ideal for adding large areas of colour and provide a great solution for any areas that need a visual safety upgrade.

For example, pedestrian walkways can help guide people safely through an area by providing a visible track to follow. Bright colours are impossible not to notice, and therefore bold solutions may often be a good choice if you want to bring extra attention to areas within your playground or school grounds.

The perfect combination

With our MMA product line, PlastiRoute™, you can easily make your playground stand out while adding skid resistance to the surface.

By enhancing areas with striking colours and friction, you can ensure that the areas are both noticeable and safe to use. Although PlastiRoute products provide a complete marking solution on their own, they are also ideal to combine with our preformed products, including DecoMark. Due to a unique cross-linking technology, our products bind well with each other without the use of a primer providing a perfect combination to give you even more options for your design project.

Make school surfaces stand out

The horizontal surfaces at a school ground can be used for more than games and hopscotches.

For example, did you consider adding your school emblem or a welcoming message at the school entrance? Or how about applying your school colours to the asphalt on selected areas to make them stand out or lead the way?

The options for school branding are manifold, and with both preformed materials, paints and plural components available, it is easy to upgrade entrances, parking spaces, and much more to reinforce your school's messages.

Apart from creating a uniform visual appearance, this can also be a way to support your inherent culture and create a recognisable environment for children and adults alike. No matter which solution you choose, we encourage you to take advantage of the potential of horizontal markings to make a lasting impression within your school environment.

YOU MAY ALSO NEED

Surface repair

Worn and damaged surfaces are unfortunately not a rare sight. Potholes, cracks, and other damages can be caused by many factors including water intrusion, heavy vehicles, and seasonal temperature changes.

It is critical to keep up with proper maintenance to prevent damage from forming or spreading further. This not only helps limit the risk of extended damages but also the need for more extensive and costly repairs. Most importantly, regular repairs prolong the lifetime of the surface and increase safety for everyone.

For playing children and other pedestrians, the rough and uneven surface of damage can be particularly dangerous. It can lead to trips and falls causing serious injuries. In addition to enhancing safety, creating a sound and even surface before the application of new markings helps towards prolonging their lifetime.

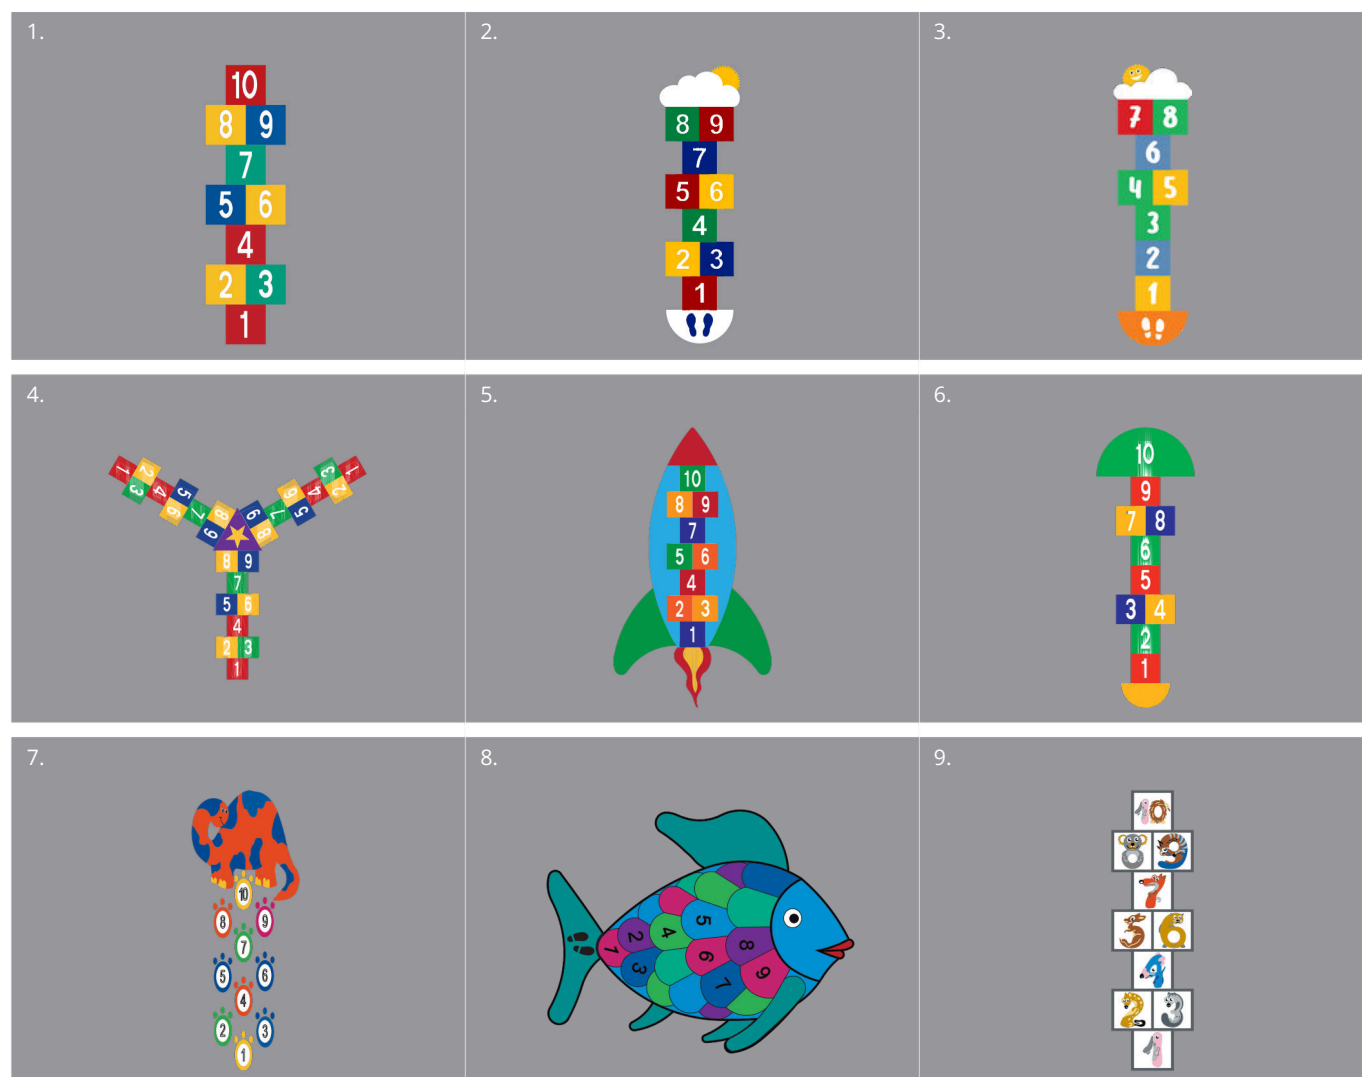

Marking the future with you

DecoMark™ Bend & Shape

Om du är på jakt efter en enkel lösning för att skapa en alldeles unik design för en lekplats kan DecoMark™ Bend & Shape vara svaret. Dessa flexibla prefabricerade linjer är enkla att manipulera till önskad form. Det gör det möjligt att skapa cirkulära former och bågar som kan användas separat eller som komplement till andra DecoMark-spel och -symboler.

- Dra nytta av alla de välkända DecoMark-egenskaperna i denna mycket flexibla version som är perfekt om du vill skära till dekorativa former och symboler.
- Snabb uppfräschning av lekplatsytor med dessa lättmanipulerade prefabricerade linjer som enkelt fixeras med hjälp av en gasbrännare.
